EXPERIENCES

Senior Fullstack Engineer

Jun. 2025 - Present

Stan

Toronto, ON

- Grew Stanley LinkedIn ARR from **\$20K to \$1.4M+ (68x)** as sole engineer and de facto PM owning the full product lifecycle
- Cut **~\$2M/yr** in AI inference via **split-block prompt caching** and model routing (**3x cheaper, 52% faster, 25% fewer errors**)
- Architected migration of **12M+ embeddings** from PGVector/Pinecone to TurboPuffer for **~10x cost reduction** via AWS Lambda pipeline, with a partial-index design that cut the sync query from **6s to 0.039ms (~150,000x)**
- Built pairwise Siamese (Bradley-Terry) ML ranker on **1.9M post pairs at 79% accuracy**, shipped as user-facing ViralScore against Creators' historical posts
- Cut new-user onboarding **4 min to 40 sec (6x)** by pulling LinkedIn ingestion off the critical path into a lazy, per-step pipeline that only loaded what the next screen needed leading to a **(+47% conversion bump)**
- Discovered and patched a **critical RCE**, account takeover bug, and **SQL injection & SSRF** vulnerabilities affecting **80K+ Creators**

Chief Technology Officer

Sep. 2024 - Jun. 2025

StorageBox

Toronto, ON

- Led development of StorageBox, a marketplace connecting Shopify merchants with local fulfillment hosts, enabling store owners to find affordable nearby storage/fulfillment while allowing individuals to rent out unused space for inventory

Project Manager

Sep. 2022 - Jun. 2025

Project Metropolis

Toronto, ON

Research Assistant

Jun. 2024 - Aug. 2024

Lassonde School of Engineering, York University

North York, ON

PROJECTS

<https://jsn.cam/projects>

Anubis | Golang, Proof-of-Work, SHA-256, JWT, ED25519, xxhash — 🔒

Mar. 2025 - Present

Anti-bot protection system using proof-of-work challenges to defend websites from AI scrapers and malicious automation

- Co-maintain open-source project at **~19K GitHub stars**, deployed in the hotpath by **United Nations, Linux Foundation, Gnome, Duke, UCLA, Arch Linux** and **50+ organizations** protecting critical internet infrastructure from automated attacks
- Achieved **4-20x performance improvements** by replacing SHA-256 with xxhash and optimizing memory allocations and efficient IP routing, enabling protection of high-traffic sites like kernel.org
- Developed automated policy engine converting basic robots.txt into enforceable anti-bot rules, enabling major organizations to deploy enterprise-grade protection with zero configuration changes

RedditVideoMakerBot | Python, Reddit, FFmpeg, AWS, Playwright, Reverse Engineering — 🔒

May. 2022 - Sept. 2024

Automated tool for transforming Reddit posts into videos using code, streamlining traditional editing workflows

- Grew to **12,200+ GitHub stars** and **400,000+ downloads** while reverse-engineering TikTok's TTS/Sessions API and Reddit's Internal Post API for **30% faster processing** and ensuring reliable operation across **10,000+ machines**

Abacus | Golang, Gin, Valkey, Docker, Jsoniter, SSE, JSONP, Linux System Administration — 🔒

Apr. 2024 - Present

High-performing and lightweight API simplifying numeric tracking and analytics, eliminating custom backend infrastructure

- Scaled to serve **940M+ requests** across **19M+ keys** while maintaining **100% uptime** and **10.2ms p99** response time
- Discovered and patched **CVE-2025-27421**, reducing server crash rate by **94%** and protecting 1,500+ daily users

Foodle | Typescript, Svelte, CSS, Python, Flask, Cloudflare, Google Analytics — 🔒

Aug. 2022 - Dec. 2023

A food-themed twist of Wordle with an additional set of modes and features

- Solo-developed Wordle clone reaching **750,000+ users** and **2.3M sessions** through user-driven feature improvements

mCTF | Python, Django, K8s, Docker, Valkey, PostgreSQL, Nebula, Nix — 🔒

Jan. 2024 - Aug. 2024

A Reusable Jeopardy-style CTF platform written using Django and Kubernetes

- Identified and rewrote critical SQL queries reducing time to execute by over **80x to 97ms** by leveraging precalculated database tables, leading to an over **50x** reduction in avg request time and an overall **60%** increase in user satisfaction

Caddy Defender | Golang, Caddy, IP Blocking, AI/Scraper Mitigation, DevOps, Markov Chains, — 🔒

Jan. 2025 - Present

Caddy module to block or manipulate requests originating from AIs or cloud services trying to train on your websites

- Built Caddy middleware plugin with **500+ stars** blocking AI scrapers through IP filtering and data pollution techniques

SKILLS

Languages: Python, Golang, Java, JavaScript/Typescript, Bash, Fish, Nim, HTML, CSS/SCSS

DevOps Tools: Linux, AWS, Cloudflare, Caddy, Nginx, traefik, Docker (Swarm, Compose, BuildX), WireGuard, GitHub Actions

Tools/Frameworks: Django, FastAPI, Flask, React, Svelte, Astro, Gin, Celery, Postman, Tailscale, Git

Databases: PostgreSQL (PostGIS, PgVector), SQLite, Redis, MySQL, Snowflake
